COD: FRSOIL000000000

Replacement filter for SOIL oil mist vacuum cleaner

Detailed description

The combination of the centrifugal action of the turbine and the high-efficiency multilayer filter set ensures a high degree of filtration. The filters are positioned after the centrifugal action of the turbine, so they are exposed to a limited amount of smaller pollutants. Because of this positioning, SOIL's filters have a longer service life than those of the leading centrifugal or static vacuum cleaners on the market.

The materials have passed stress tests for compatibility in contact with numerous types of oil and emulsions on the market.
